Lab network plan
scheduler queue, e.g. flake scan of chip 12 allocation calendar, e.g. 320-student workshop
Workload capture
query statistics tagged with the task, user class and agent version that issued them
Forecast
announced work × footprints + short-horizon forecast of open traffic
Behaviour model and planner
cost of each query under each action; cost of the action; budget
Actions in idle windows
indexes, summary tables; connection reservations per user class; rate limits for machine clients
Engines and clients
PostgreSQL (system of record), object store, graph, vectors; serving instruments, planners, people, open readers, agents
measured latency per user class: keep or revert each action
